

## Project 2 Design Documentation

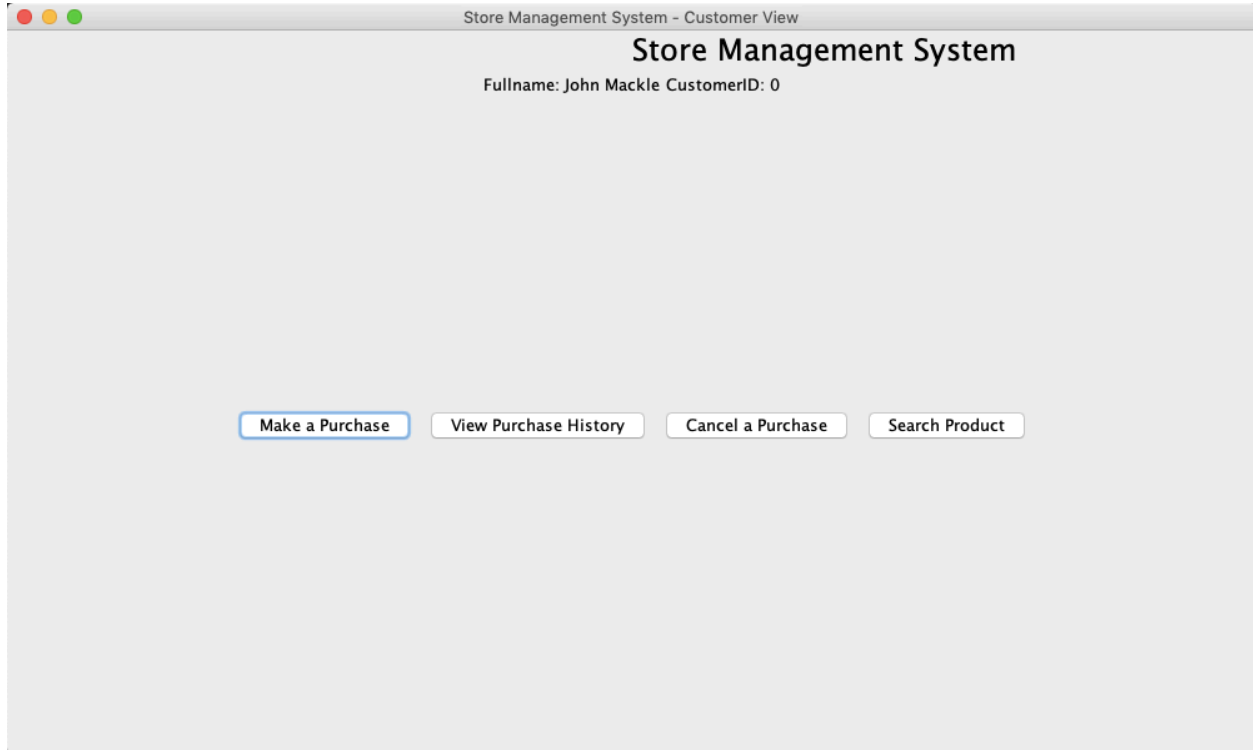

This store management system Logs you in according to what type of user you are, such as customer, manager, cashier, or administrator. It will give functionalities that is associated with the hierarchy of the positions.

Login example:

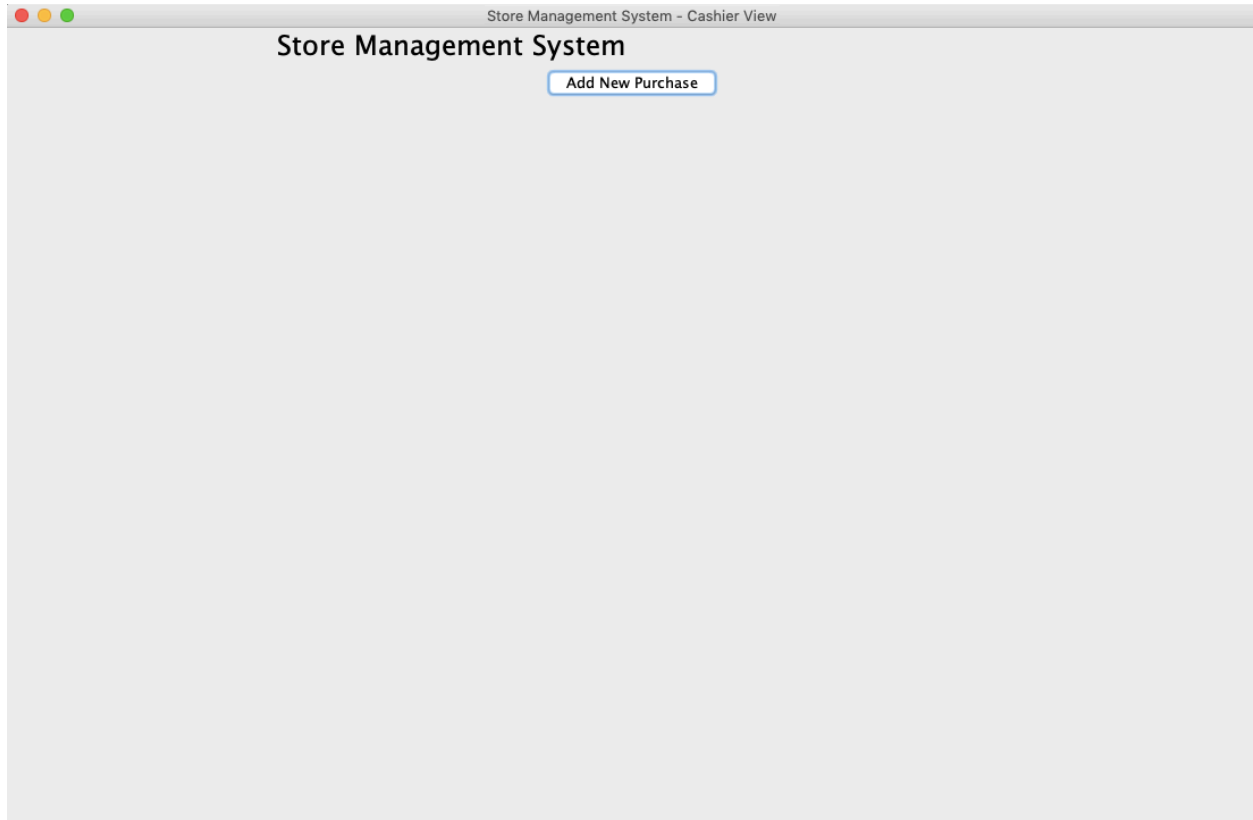

Then it will view screen according to what position you are in the store.

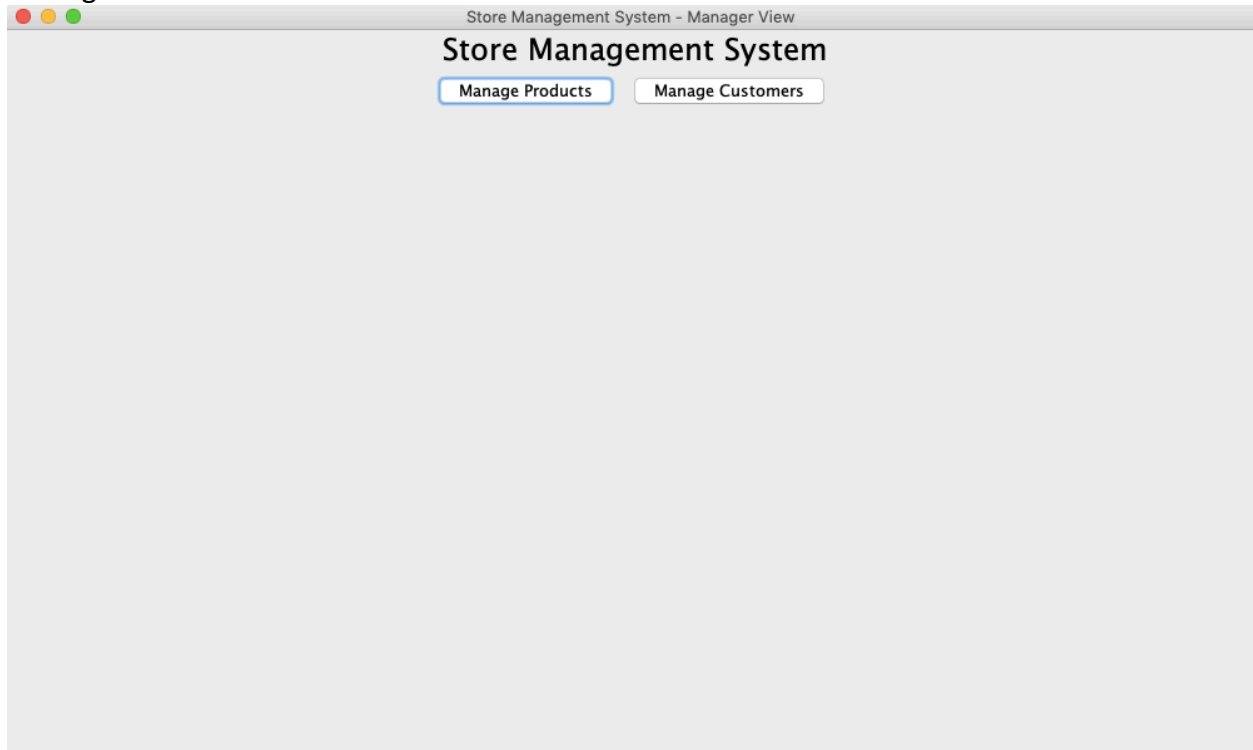

## Customers

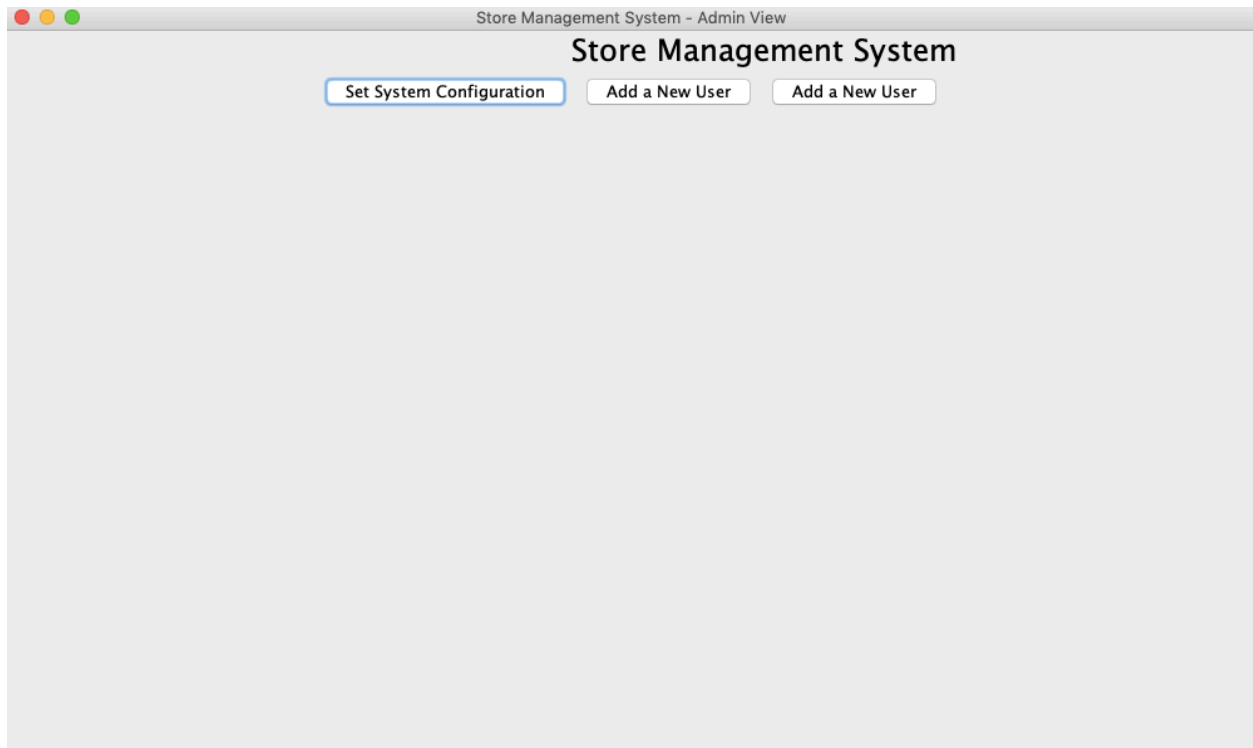

Cashier

Manager

Admin

Depending on what position you in the store you can load/save products, customers or purchases.

For example, customer should not be able to load/save products, only manager should be able to as shown.

A screenshot of a web application window titled "Update Product Information". At the top, there are two buttons: "Load Product" and "Save Product" (highlighted with a blue border). Below the buttons, there are four input fields, each with a label to its left: "ProductID" with the value "7", "Name" with the value "Popcorn", "Price" with the value "2.15", and "Quantity" with the value "15".

After user is finished using the software they log out of the system.
